## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 and 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jairazhboy (5,685,475) in view of Iwana (JP 55-16726). Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Jairazbhoy et al. teach supplying a melt of solder such that the solder material adheres to a predetermined portion of the board in a solder material supply zone (Figure 1, Item 20); and cooling the board by a cooling unit in a cooling zone such that the solder material adhering to the board is rapidly cooled to solidify (Column 2, Lines 65-67 and Column 3, Lines 20-31); a cooling rate not less than 200 C/min (Column 2, Lines 65-67 and Column 3, Lines 20-31); cooling unit that uses gas cooling (Column 3, Lines 25-31); cooling with a gas having nitrogen (Column 3, Lines 25-31); cooling with a gas having nitrogen (Column 3, Lines 25-31)); wherein a temperature of an atmosphere in the conditioning chamber is capable of being in the range between a melting point of the solder material and a heat resistant temperature of the electronic component (col. 2, ll. 15-30). Iwana teaches the conditioning chamber the board is capable of conditioned such that the solder material adhering to the board in a completely molten condition immediately after wave soldering (figure 1, item 4). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the

wave soldering system of Jairazhboy to utilize a post heater in order to prevent solder bridging or burring (see Iwana abstract).
